11. Carboni, E. A

Trans. of la Prensa Méd[ica] Arg[entina] 1960, v. 47,
22 Jan, p. 179-186.

Experience in the treatment of 20 patients is reported.
Twelve of these patients had previously been treated
with sulfones, to which most had been intolerant. A
daily beginning dose of 500 mg was increased by 500 mg
each week to a maximal dose in some cases of 3 g.
Tolerance was good. The patients not previously
treated showed best results (flattening and absorption of
the lepromata, regression of infiltration of plaques,
regression of spots). Case histories are included.

THE LAMINAR BOUNDARY LAYER AT HYPER-
SONIC SPEEDS. (Sullo strato limite laminare in
corrente ipersonica.) Carlo Ferrari. September
1961. 56p. OTS price, \$1.50.

(NASA TECHNICAL TRANSLATION F-71. Transla-
tion from Aerotecnica, v. 36, no. 2, April 1956,
p. 68-94 (Italy).)

A theoretical study of the laminar boundary layer on
an airfoil immersed in a hypersonic stream is made
under the assumption that (a) there is no heat transfer
to the wall, and (b) there is zero gradient of pressure
normal to the direction of development of the layer
along the wall. Numerical applications are presented
to illustrate the use of the theory for flow along a flat
plate and for flow along a curved wall for which the
shape is specified by certain governing profile
parameters.
